

**Coal tar kiln burner**

**Product introduction of coal tar kiln burner:**

Coal tar kiln burner a kind of burner applied in kiln industry, using coal tar as fuel. It is also an important part in boiler, hot-blast stove industry. The coal tar burner is widely used in various manufacturing area like asphalt mixing plant, cement, glass, steel production, food machinery, drying plant etc. and it is also used for civil, deal of industrial waste gas, liquid waste, anti - explosion. Our combustion machine with advantages of complete combustion, high heat utilization rate, high efficiency and energy saving etc.

**Product specifications of the coal tar kiln burner:**

1. Classified by fuel control mode: Single selection fire burner, double selection fire burner, adjustable fire burner;
2. Channels: Three, Four, Five, Six, multi-channels;
3. International advanced technology: Thrust vector control technology; Fuel oil secondary atomization technology; Fuel oil dynamic (pulsed, intermittent) combustion technology; Fuel oil oxygen-enriched and pure oxygen combustion technology; Flat flame combustion technology for heavy residue oil; Low noise high speed burner technology; Cold electronic direct ignition of coal tar technology; Desulphurization technology in oil combustion process. Desulphurization additives and desulphurization of fuel oil exhaust; High efficient, energy saving, environmental protection combustion technology; thermal energy and power engineering technology;

**Patent, certificate & qualifications of the coal tar kiln burner**
